Press release: 17th December 2021

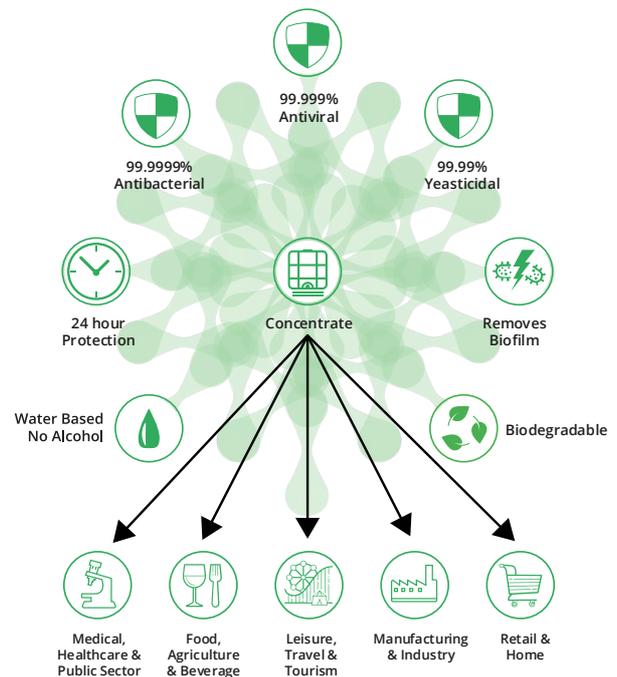

RBT is Innovation Finalist for Medilink Business Awards

Based in the Midlands, Residual Barrier Technology (RBT) has been shortlisted for a prestigious award which recognises and promotes the excellence that East and West Midlands companies are achieving at the leading edge of the Life Sciences sector.

We are being recognised for the development of our innovative water-based disinfectant, Protectus Viridis. It forms the basis for our ground-breaking range that achieves clinically proven broad spectrum kills on harmful bacteria, viruses, and yeast, including Coronavirus, and is independently tested to be 99.999% effective.

Putting life and our environment first, RBT have developed a range of surface disinfectants and hand sanitisers that are highly effective, non-flammable, water-based and are kinder to the environment than more traditional disinfectants such as bleach, alcohol, and chlorine. Our products even continue working after they have dried, providing long lasting protection on both surfaces and hands in the medical, domestic, and industrial areas. Some of the advantages of Viridis are:

- 100% biodegradable.
- Water-based, Halal certified.
- Up to 24-hour residual efficacy on surfaces.
- Up to 4-hour residual efficacy on hands.
- Suitable for use on sensitive skin.
- Food safe, no-rinse formulation.
- Independently tested.
- Toxicologically risk assessed for inhalation.

The development of our advanced Viridis products is achieving global recognition with interest from many multi-national healthcare, FMCG, food manufacturing, shipping and haulage businesses interested in reducing their environmental impact while maintaining effective modern disinfectant protocols.

Christine Brander, RBT's founder and CEO, began developing the Daventry based business in 2008. She recognised the need for more effective and biodegradable sanitising solutions while researching anti-bacterial coatings for one of her other businesses that supplies sinks and wash stations to the NHS. Christine has been instrumental in building the business into an international supplier of disinfectants and hand sanitising solutions.

Along with her brother Stuart, Christine also manages Die-Pat; a business set up by their mother in 1966. Together they have built Die-Pat up to be the largest UK catering supplier and both have an active role in the day-to-day management of RBT.
